

**A full-service
provider**

An **all-round** subcontractor

Blekinge Pressgjuteri was founded in 1994 and is today a full-service provider. With a passion for technology, a broad range of expertise and great commitment, the company has positioned itself in the market as a reliable and competent subcontractor.

High quality in accordance with **customer requirements**

Our customer groups are found in most industries, for example in the medical technology sector, as well as companies that provide components for the process and defence industries. Our strength lies in delivering finished products which involve strict requirements for versatility, speed and quality, and at competitive prices. We are involved from the conceptual stage through to delivery of a finished product, in accordance with the environmental and quality requirements agreed with customers and specified in our own policies.

Resources and flexibility

3

Our headquarter is located in Sölvesborg, with a 5,000-square meter facility. Our company in Poland has a 1,500-square meter factory. Through continuous investments, both in the past and in the future, we have acquired modern machinery with the capacity to have a wide range of customer categories and products. Along with skilled staff and continuous training, we have the best conditions for efficient and flexible manufacturing processes.

A broad range of machinery

DIE CASTING MACHINES

Our die casting machines enable the manufacture of products from 5 grams to about 15 kg. The total range of clamping force load capacities ranges from 320 tons to 1100 tons. The machines are equipped with robot control to ensure high productivity combined with safety and quality.

Our range of machinery is constantly being rejuvenated and in this way, we also maintain our awareness and concern for the environment.

CNC MACHINES

Our state of the art CNC machines provide high productivity and quality. The machinery used in cutting work consists of both vertical and horizontal multi-function machines, with up to 40 tool locations on each. We also have multi-function lathes with power-driven tools to ensure efficient and qualitative precision work.

As an established manufacturing company, naturally we also have access to other common workshop machinery.

More than just a die casting factory

Our manufacturing process specializes in aluminum die casting with subsequent machining, finishing and assembly in accordance with our customers' requests. We can also offer the same manufacturing stages for details in zinc. With a unique concept, we control the entire chain, from the manufacture of molds to the delivery of complete systems. Our customers need only choose us as a supplier, and we will be in control of the entire process. This means we can guarantee the speed, quality and the appearance of the finished product.

Die casting is performed using efficient machinery with a high level of flexibility and productivity. In the cutting process, we use CNC lathes and multi-function machines incorporating the latest technology, which contributes to resource-efficient and cost-effective manufacturing.

Focus on **quality and the environment**

Our staff has a significant position in our business. We work continuously to improve our employees' commitment and expertise. At Blekinge Pressgjuteri we strive to create a work environment where everyone feels part of a real community where participation, trust and responsibility are important factors.

To comply with our customers' - as well as our own - quality and environmental standards, we work according to our management system that is certified in accordance with ISO 9001 and ISO 14001. To control and maintain our product quality, in addition to calipers and other common instruments we also have a coordinate-measurement machine in-house. Our active environmental policy manifests itself, for example, in the fact that we invest in modern equipment that pollutes the environment less. We also cast our products in recycled aluminum alloy. This not only safes the environment, it also results in a better end product.
